TOGETHER FOR SUSTAINABILITY

To start **a conversation on sustainability with our customers** and to tackle carbon emissions from food, we have added the carbon footprint of all the dishes on our menus. We are working with Klimato to implement **scientifically proven, data-backed carbon labels** that will help our guests understand the climate impact of their chosen dishes.

Very low

In line with the Paris Agreement goal to limit temperature increase to well below 2°C above pre-industrial levels.

Low

In line with the targets set for 2030. This puts us on a good path for 2050. **Aligned with the Cool Food, a WRI initiative.**

Medium

Associated with a **temperature increase of 2.5°C** above pre-industrial levels.

High

Associated with a **temperature increase of 3°C,** above pre-industrial levels.

Very high

Associated with a **temperature increase higher than 3°C** above pre-industrial levels.

The Klimato carbon labels indicate the carbon footprint of a dish. The thresholds are based on targets set forth by the **Paris Agreement**. Klimato's tool was created **by scientists** and it uses the **most up to date climate data** from **lifecycle assessments** to calculate the carbon footprint of each meal. The carbon footprint of a meal is the total amount of greenhouse gas emissions (CO₂e) that stem from the ingredients through each production stage.

Klimato

Klimato is a sustainability partner for any business with a F&B offering to calculate, report and reduce the carbon emissions from food and beverage. So far the solution is **used by more than 500 companies** in more than 15 markets. During only 1 year, over 10 million meals were reported with Klimato and the average emission reduction per meal was 23%.
