

At Sofitel Krabi Phokeethra Golf & Spa Resort, we recognize the importance of cultivating resilience through water stewardship and reducing our water footprint through ambitious, science-based initiatives to transform operations and practices while respecting the planetary boundaries.

Using less water has multiple benefits:

- Only 3% of the Earth's water is freshwater, with around 1.2% suitable for drinking. Reducing our water consumption reduces the pressure we place on the world's water resources.
- Conserving water helps reduce our carbon footprint as it helps reduce the energy required to filter, clean, heat and pump water for our usage.
- More fresh water remains within our ecosystems, particularly wetland habitats, which is important for an array of local biodiversity such as herons, otters & fish to thrive.

Estimated Consumption Statistics

- **Taps / Faucets:** 6.5 litres of water per minute
- **Showerheads:** 8 litres of water per minute
- **Bath:** 200 litres of water if full

How You Can Help

- Remember to turn off you tap faucet whilst you brush your teeth.
- Report any leaks to the front desk immediately so our team can take swift action.
- Be mindful of your water usage.

Our Initiatives

- At Sofitel Krabi Phokeethra we only use native trees and plant life specially adapted to thrive in the local climate and weather conditions. This enables us to eliminate the necessity for intensive irrigation.
- We have in multiple sub meters of our water usage throughout the property to help more accurately detect the locations of potential leaks when they occur.
- All showerheads and taps have been fitted with flow regulators to help reduce litres of water released per minute when used.
- We have also invested in a water treatment plant which filters grey water to be re-used to irrigation, helping reduce our consumption needs and requirements for landscaping & maintenance.

Let's save water together.... Towards Sustainable Hospitality
